Seed Treatment Trials

The results coming in from Iowa State are not complete at this time but the preliminary results they shared at the ICM Conference were quite positive.

In fields with 0% visual Sudden Death Syndrome Symptoms there was a 1.66 bu increase in yield. Where there was a .1 to 5 disease rating they showed a 3.3 bu increase.

5.1 to 10 disease rating = 3.7 bu increase
10.1 to 20 disease rating = 5.4 bu increase
<20 disease rating = 5.5 bu increase

Although 1.6 bu doesn't quite pay for the treatment there aren't too many years we see 0% SDS. This looks like a good way to get a good return on your money. **Remember we can add this treatment to ALL brands of seed at each of our facilities.**

PREPAY FERTILIZER & CHEMICALS NOW THROUGH JANUARY 15, 2016

7 by 5

Have you heard of chemical modes of action? Well if you haven't it is our most important tool in combating Waterhemp and other problem weeds. Waterhemp alone has shown resistance to 6 different modes of action.

Our goal and process for having clean beans involves 7 modes of action by the time the beans are 5 inches tall.

Spraying beans late hurts yield and reduces our ability to control weeds. Expect us to be in your bean fields earlier than ever this year as our goal is to have all your beans sprayed by the 20th of June (weather permitting).

Ask your sales representative how we are planning to give you your cleanest beans yet!

**Mark your Calendars for March 3,
2016 (at the Rendezvous in
Muscatine, IA).**

**We want you and a guest to join us
for drinks/dinner and guest speaker
Dr. Barry Flinchbaugh PhD, Professor
of Ag Economics, Kansas State
University**

"Now that Letterman has retired Professor Flinchbaugh will take up the slack and discuss AG's TOP 10. Issues such as water, science, biotechnology, concentration, climate change, trade, immigration, energy, and macroeconomic policy will be discussed. Flinchbaugh will do this in his usual blunt and provocative fashion sprinkled with an abundance of humor."
